© 060207, Kantonales Labor Zürich, 8032 Zürich

KANTONALES LABOR
ZÜRICH

Not registered drugs in veterinary medicine?

- New emerging strains of bacteria can ruin aquaculture within a whole region or country
- Anything which reduces mortality of livestock might be used
- There are a lot of banned, yet very effective drugs (e.g. chloramphenicol, nitrofurans etc.)
- There are even more analogues which were abandoned in human medicine clinical trials

© 060207, Kantonales Labor Zürich, 8032 Zürich

KANTONALES LABOR
ZÜRICH

Limitations of MS-MS based multiresidue methods

- MS-MS is a victim of its own selectivity
- MS-MS finds only analytes which have been previously tuned

© 060207, Kantonales Labor Zürich, 8032 Zürich

KANTONALES LABOR
ZÜRICH

Limitation of LC-MS/MS for multiresidue methods

Multiple compounds can be monitored,

But how far can or should we go ?

Can we or our software manage all these transitions?

- An analyte might produce more than one peak
- Some analytes might produce the same MRM
- A pH sensitive analyte might move out of a window
- A labile analyte might have degraded in the standard solution

© 060207, Kantonales Labor Zürich, 8032 Zürich

KANTONALES LABOR
ZÜRICH

Limitation of LC-MS/MS for multiresidue methods

Monitoring dozens of MRMs reduces sensitivity.

Managing these MRMs can become a difficult task.

New analytical strategies in veterinary drug control

- The challenge

• New analytical strategies (Multiresidue methods)

- High resolution liquid chromatography & mass spectrometry

- The Future: Generic detection

© 060207, Kantonales Labor Zürich, 8032 Zürich

KANTONALES LABOR
ZÜRICH

Ultra performance liquid chromatography coupled to high resolution mass spectrometry can be the answer

- Provides similar selectivity as MS/MS
- Sensitivity becomes comparable to MS/MS
- Full scan data
- Qualitative work without standards

© 060207, Kantonales Labor Zürich, 8032 Zürich

More compounds and lower concentrations

Variety of analytes

© 060207, Kantonales Labor Zürich, 8032 Zürich

KANTONALES LABOR
ZÜRICH

The analytical method

Conflicting extraction & clean-up requirements

- Aminoglycosides require low pH extraction for sufficient recoveries
- Penicillines degrade at low and high pH values
- Tetracyclines require complexing agents for good recoveries

© 060207, Kantonales Labor Zürich, 8032 Zürich

KANTONALES LABOR
ZÜRICH

More compounds and lower concentrations

Concentration range (MRL&MRPL):

- 0.3 µg/kg Chloramphenicol
- 20 µg/kg Tetracycline in honey
- 600 µg/kg Tetracycline in kidney
- 5000 µg/kg Neomycin in kidney

© 060207, Kantonales Labor Zürich, 8032 Zürich

KANTONALES LABOR
ZÜRICH

Analyte loss I: Extraction

Extracting solvent polarity does not correspond to analyte

© 060207, Kantonales Labor Zürich, 8032 Zürich

KANTONALES LABOR
ZÜRICH

Extraction Recovery

- One single solvent can not extract the whole analyte polarity range
- Bi-polarity Extraction:
Emulsion of two immiscible solvents permits parallel extraction

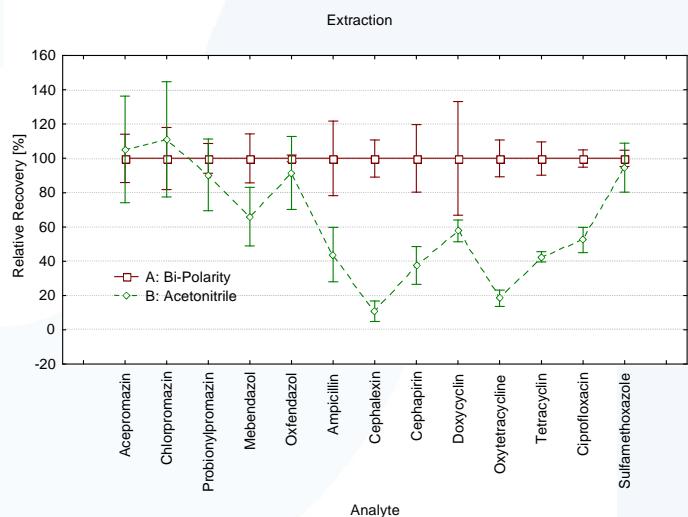

(acetonitrile/aqueous buffer with high concentration of ammonium sulfate to induce phase separation)

© 060207, Kantonales Labor Zürich, 8032 Zürich

KANTONALES LABOR
ZÜRICH

Extraction Recovery

KANTONALES LABOR
ZÜRICH

Analyte loss II: SPE

Solid phase extraction breakthrough and irreversible retention

- Polymer reversed Phase SPE (OASIS HLB)
- Solvent free loading solution
- pH control of loading solution
- Two elution steps (solvent and buffer in solvent)

© 060207, Kantonales Labor Zürich, 8032 Zürich

KANTONALES LABOR
ZÜRICH

Analyte loss III: Adsorption

Adsorption by precipitating proteins and on vessel walls

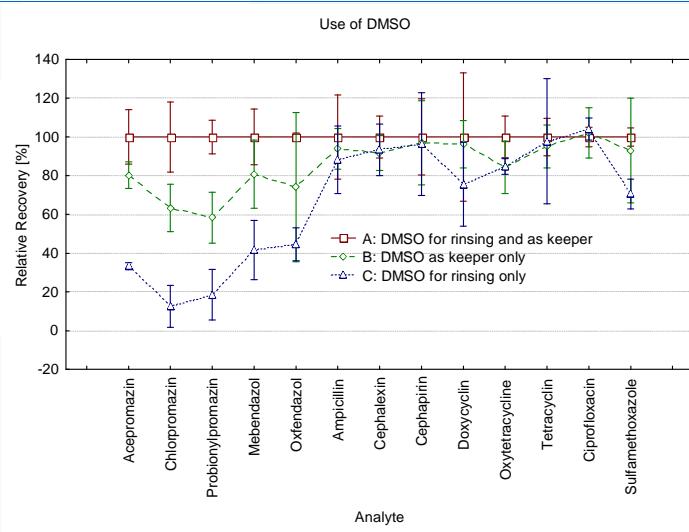

- High ionic strength
- Rinsing of vessels and residues with aqueous dimethyl-sulfoxide
- Avoidance of glassware
- No evaporation till dryness, use keeper

© 060207, Kantonales Labor Zürich, 8032 Zürich

Multiple target analysis

Chinolones: Ciprofloxacin; Danofloxacin; Enrofloxacin; Flumequine; Oxolinic acid; Enoxacin; Lomefloxacin; Nalidixic acid; Norfloxacin; Ofloxacin; Difloxacin; Sancinetoin; Piromidic acid; Sparfloxacin; Azithromycin

Sulfonamides: Sulfaguanidin; Sulfanilamide; Sulfadiazin; Sulfathiazol; Sulfapyridin; Sulfamerazin; Sulfameturon; Sulfdimidon; Sulfamethopyridazin; Sulfachlorpyrazin; Sulfadoxin; Sulfadimethoxin; Sulacetamid; Sulfamethoxazol; Sulfisoxazol; Sulfabenzozid; Sulfamer; Sulfamonomethoxin; Sulfamoxole; Sulfanilamide; Sulfaguaninoxalin; Sulfasalazine; Sulfosomolin;

Tetracyclines: Oxytetracycline; Tetracyclin; Chlortetracycline; Minocyclin; Doxyeycyclin; Demecycyclin

Nitroimidazoles: Ipronyl; Tinidazol; Metronidazol; OH-metronidazol; Ronidazol; Metronidazole; p-metridazole; HMMNI; Tinazazol

Cephalosporines: Ceferazon; Cefazolin; Cephalexin; Cephapirin

Avermectins: Ivermecting; Ivermectin; Doramectin; Emamectin; Eprinomectin

Macrolides: Roxithromycin; Tylosin A; Erythromycin A; Tilmicosin; Spiramycin I; II; III; Olendomycin; Josamycin; Tulathromycin;

Lincosamides: Lincosamide; Lincomycin; Pirlimycin; iso-Pirlimycin; Clindamycin; Tiamulin

Benzimidazoles: Fenbendazol; Albendazol; Flencyan; Oxfendazol; Mebendazol; Ofendazol; Oxibendazol; Parabendazol; Cabenazon; Tricloberazol;

Penicillines: Ampicillin; Naftiampicillin; Benzicillin G; Penicillin V; Dicloxacillin; Cloxacillin; Amoxicillin; Oxacillin

Tranquilizers: Acepromazin; Acipertol; Azaperon; Carozole; Chlorpromazin; Promylnpromazin; Xylazin

Various: Acriflavin; Praziquantel; Trimethoprim; Diaveridin; Rifampicin; Pyrimethamin; Rifamixin; Virginiamycin

Comparing apples to oranges

Comparing

2 dimensional data (MS/MS)
versus
1 dimensional data (HRMS)

© 060207, Kantonales Labor Zürich, 8032 Zürich

KANTONALES LABOR
ZÜRICH

The approach

- Producing extracts from blank matrices
- Separating the extracts by UPLC
- Monitoring dummy transitions (MS/MS)
dummy exact masses (HRMS)
- Make observed peak areas comparable

© 060207, Kantonales Labor Zürich, 8032 Zürich

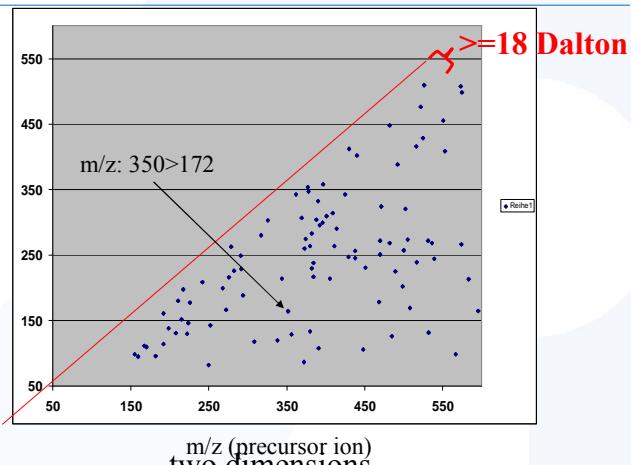

KANTONALES LABOR
ZÜRICH

Dummy transitions (MS/MS)

m/z
(product ion)

two dimensions
Some of these transitions are probably impossible
(not existing elemental composition for neutral loss)

© 060207, Kantonales Labor Zürich, 8032 Zürich

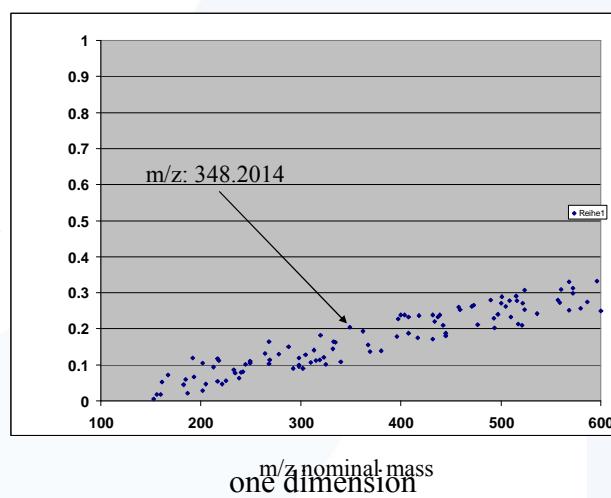

KANTONALES LABOR
ZÜRICH

Dummy exact masses (HRMS)

mass defect

one dimension
Only a relatively narrow mass defect range was tested

© 060207, Kantonales Labor Zürich, 8032 Zürich

KANTONALES LABOR
ZÜRICH

Comparing apples and oranges

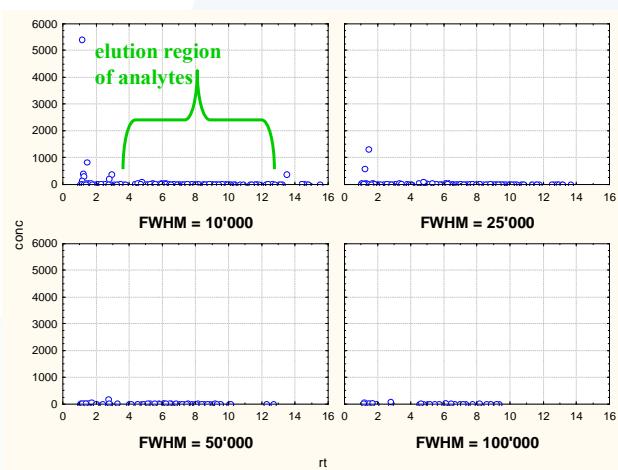

- Select 6 drugs (tetracyclines, chinolons and sulfonamides)
- Determine their response “peak area / concentration”
- Calculate average response for these 6 drugs
- Divide each dummy peak area by the average response
- Do this for MS/MS and HRMS dummy peaks

KANTONALES LABOR
ZÜRICH

Postulated phenomena: post interface signal suppression

© 060207, Kantonales Labor Zürich, 8032 Zürich

KANTONALES LABOR
ZÜRICH

How to reduce post interface signal suppression

- Resolution $\geq 50'000$ FWHM
low scan start. e.g.: $m/z = 50$
reduced number of ion in C-trap. e.g.: $\leq 1'000'000$
limited C-trap filling time. e.g. ≤ 50 ms
- less injection volume
more extensive protein removal

© 060207, Kantonales Labor Zürich, 8032 Zürich

KANTONALES LABOR
ZÜRICH

Low protein method

- Multiresidue methods do not like extensive clean-up
(more than 100 analytes in different matrices)
- Testing almost every known protein removal method

© 060207, Kantonales Labor Zürich, 8032 Zürich

KANTONALES LABOR
ZÜRICH

Key elements of modified method

- High ammonium sulphate concentration in extraction buffer
- Bipolarity extraction (buffer and acetonitrile)
- Evolute ABN SPE (Biotage) narrow pore size
- Kinetex Core-Shell column 150*2.1 mm; 2.6 µm
